(a) against the dense population
PIE count (mean, 95% of splits)
models per population (n)
dense vs dense (floor)
30% pruned vs dense
50% pruned vs dense
70% pruned vs dense
90% pruned vs dense
(b) within-population floors (exploratory)
PIE count (mean over 1,000 splits)
models per population (n)
dense vs dense
30% pruned vs 30% pruned
70% pruned vs 70% pruned
90% pruned vs 90% pruned
